Optibar

Your material optimizer

The Optibar, our new logistics module, is in combination with our PICK BY LIGHT system R.IZO invincible and indispensable in a modern logistics environment.

It is instant ready for use after simple and self-made assembly. Through the connected light module, the level of the active material roller conveyor is displayed.

The Optibar can be used individually or multiple times in a lane and uses its intelligent sensors to determine whether a container is still there or not.

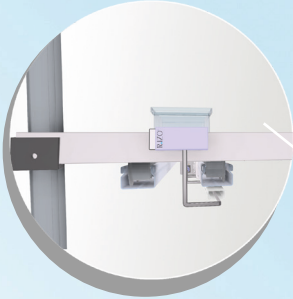

The connected light module serves as a level indicator or supports the Logistikan with a light signal for refilling the correct lane.

Through the Optibar each individual lane can also be evaluated digitally. If a digital visualization is desired - no problem!

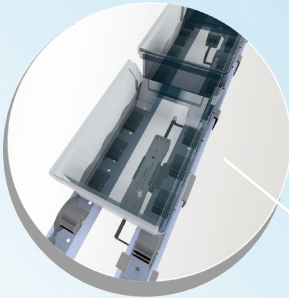

R.IZO[®]

by MOTTO: LEAN!

scan me!

- ✓ Easy assembling and integration into existing roller conveyors
- ✓ Filling level via light module
- ✓ Integrated pick by light system for guided logistics

- + Inventory reduction through real-time tracking
- + Minimizing the refill time of a kanban cycle through integrated light module
- + Real-time inventory visibility - anytime
